

List of maps and graphics

4–5 Data warning/Foreword

- Waste at every stage
- Timeline: A history of waste management

6–7 Contents

- A product's life story

PRODUCTION

8–9 Mountains of altered rock, lakes of gleaming liquids

- Waste generated for selected ore
- Mining waste in Europe
- Australia mining emissions to water and land
- Aluminium production wastes
- World bauxite production

10–11 No energy without waste

- Energy production waste in Europe
- Ferghana valley hotspots
- World energy consumption
- World energy demand
- Age of world nuclear reactors
- Spent nuclear fuel arisings

12–13 The big waste factory

- World paper production
- Mobile phone composition
- Hazardous waste generated in Europe
- Typical hazardous wastes generated by selected manufacturing industries

DISTRIBUTION

14–15 The packaging nightmare

- Photo series: unwrapping a laptop computer
- Share of packaging waste in Europe
- Packaging waste production per capita in Europe
- Packaging waste composition in the UK
- Packaging recycling rates in the UK

16–17 Message 'round a bottle

- World major bottled water consumers
- Bottled water consumption in the US
- World exporters and importers of bottled water

CONSUMPTION

18–19 Consumption worlds

- 7 photos of families
- Household expenditure trend
- World population trend

20–21 The relativity of “basic needs”

- World household expenditure 1970-2003
- Chinese households consumption trends
- Household expenditure and waste generation for selected countries
- Mobile phones per 1000 people in 2002 and 2004
- World advertising expenditures

DISPOSAL

20–21 Counting the bins

- Electronic waste types
- Japanese household waste composition (Neyagawa and Osaka)

24–25 Dump, bury or burn?

- Solid waste management costs for selected cities
- Waste management choices in Europe
- Age and sex distribution of waste scavengers in Buenos Aires

26–27 A model for waste processing?

- Heftingsdalen waste transfer
- Southern Norway household waste production
- Heftingsdalen waste processing plant

28–29 Creative Alternatives

- BedZED location map
- Curitiba location map
- Curitiba city map and “cambio verde” collection sites
- Waste collection in Curitiba 1990-2005

30–31 Recycling – the right choice?

- Comparing biodegradable, disposable and conventional tableware
- Glass and paper recycling rates for selected OECD countries
- Virgin versus recycled paper lifecycles
- Household waste and recycling in England 1984-2005

32–33 Discarding mastodons

- Planes to be dismantled by 2035
- Cars to be scrapped in Europe by 2015
- Ships sold for breaking 1990-2004
- Major shipbreaking countries
- Alang shipbreaking yard, broken up tonnage 1982-2005

34–35 Routes of official waste trade

- Reported waste movements 1993-2003
- Major waste exporters in 2003
- Major waste receivers in 2003

36–37 Crime industry diversifying

- Waste trafficking stories
- Major merchandise ports
- IMPEL Seaport project II: findings and participating ports

38–39 International mobilisation

- 4 waste conventions World map
- Parties to the Basel Convention

40 Defining and quantifying waste: a tricky undertaking

- About the difficulties of classifying waste

Youth and Pupils! Collect old paper!

1 tonne of used paper is 750 kilograms of new paper.

This saves 5 cubed metres of forest!

(Soviet poster from the 1950ies)
